The approval step was the training data.

Clay's outbound message generator, Revolt! 2026 · Day 2

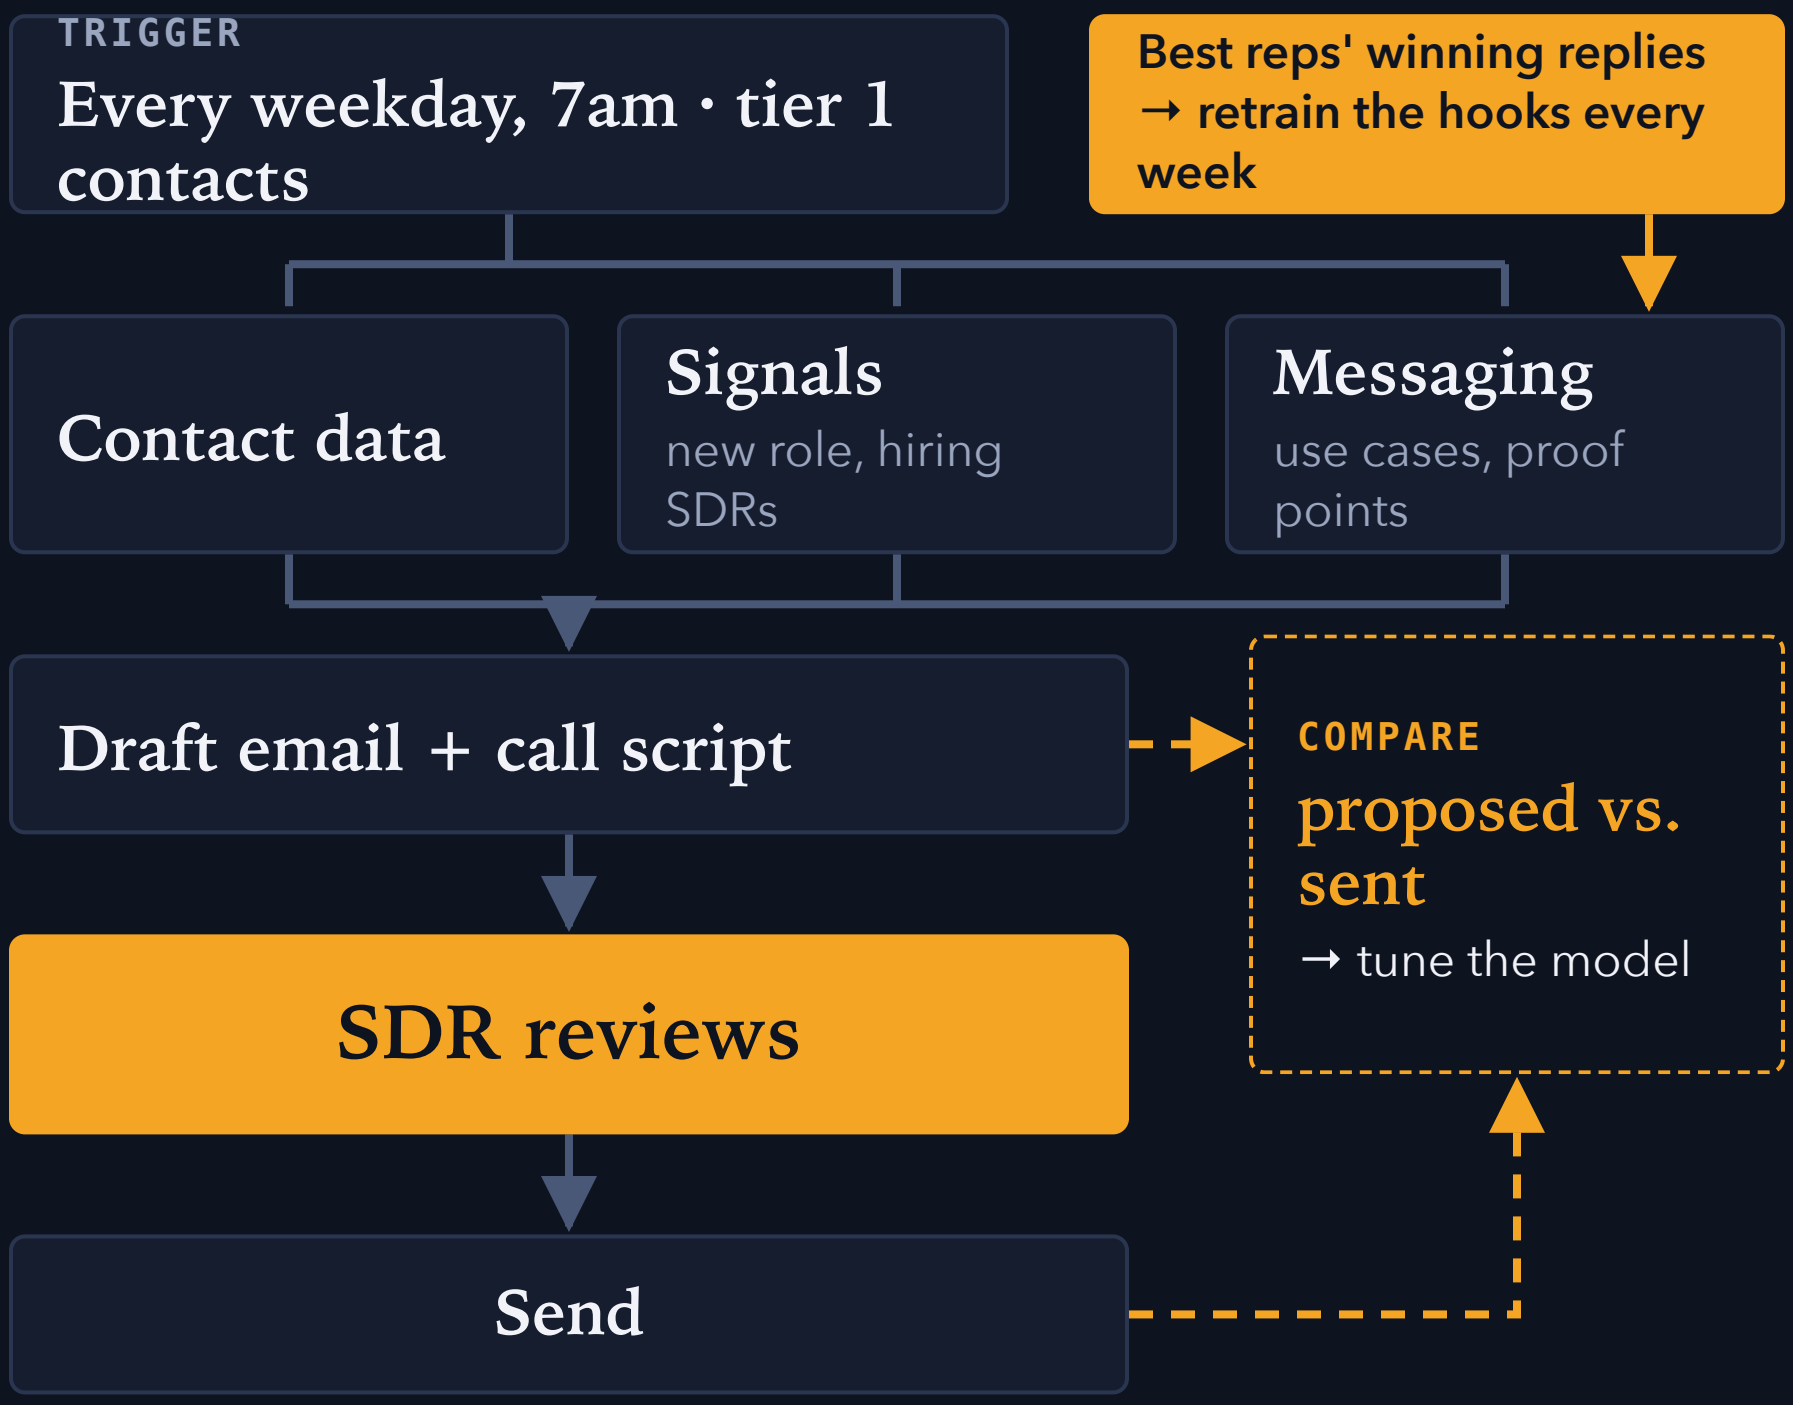

Davide Grieco
Head of Growth, Clay · Oct 15, 2026

Source: Davide Grieco, Revolt! 2026 (RevGenius), Oct 15, 2026

BEFORE · GATE ON

At launch: SDRs review drafts before send

AMBER = HUMAN STEP

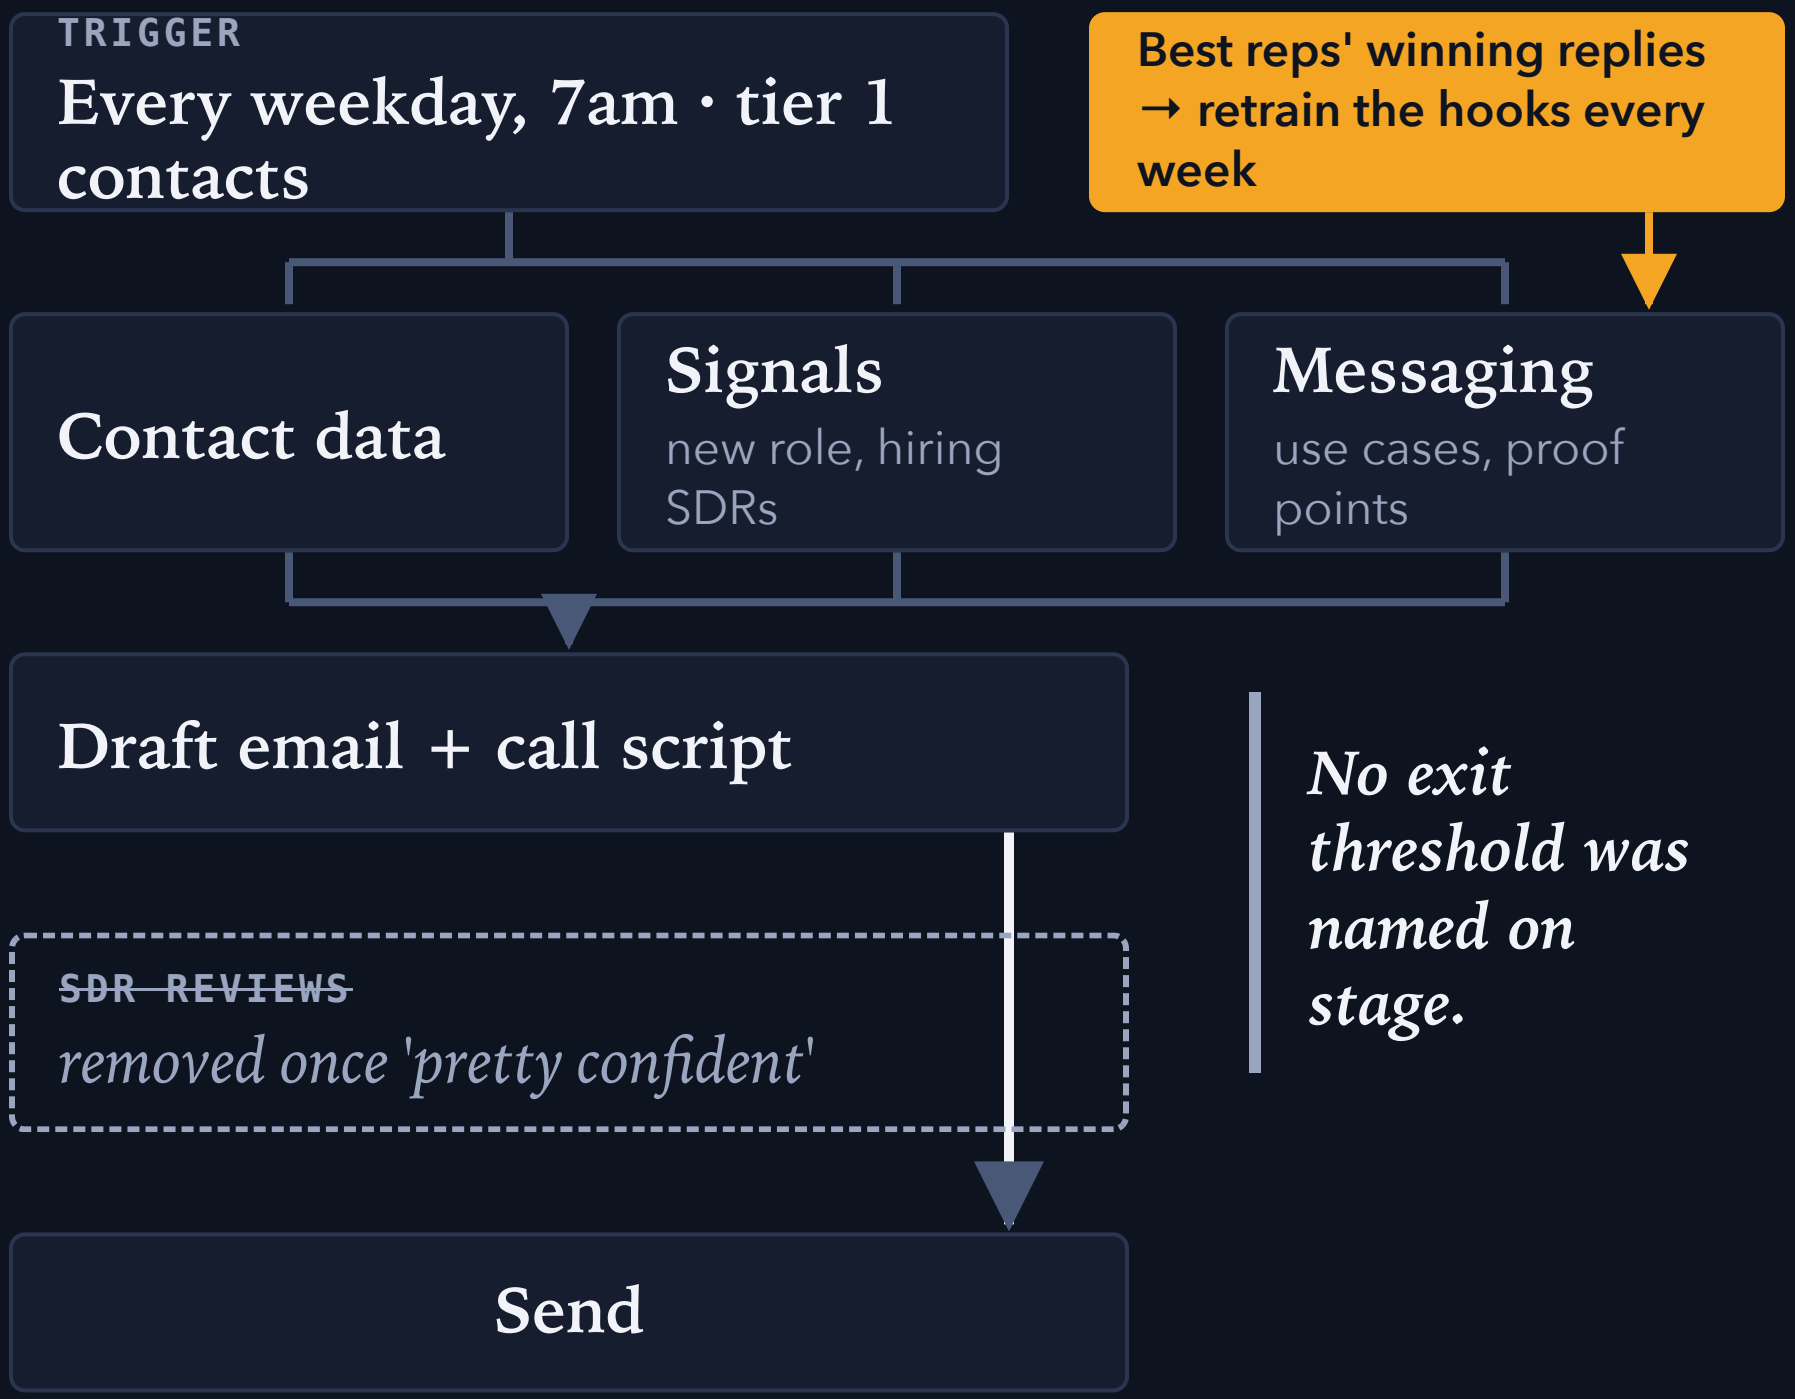

Source: Clay deck (slide 'Email generator tuned for use across all GTM plays'); Grieco, 19:30. Redrawn.

AFTER · GATE OFF

Now: end to end

AMBER = HUMAN STEP

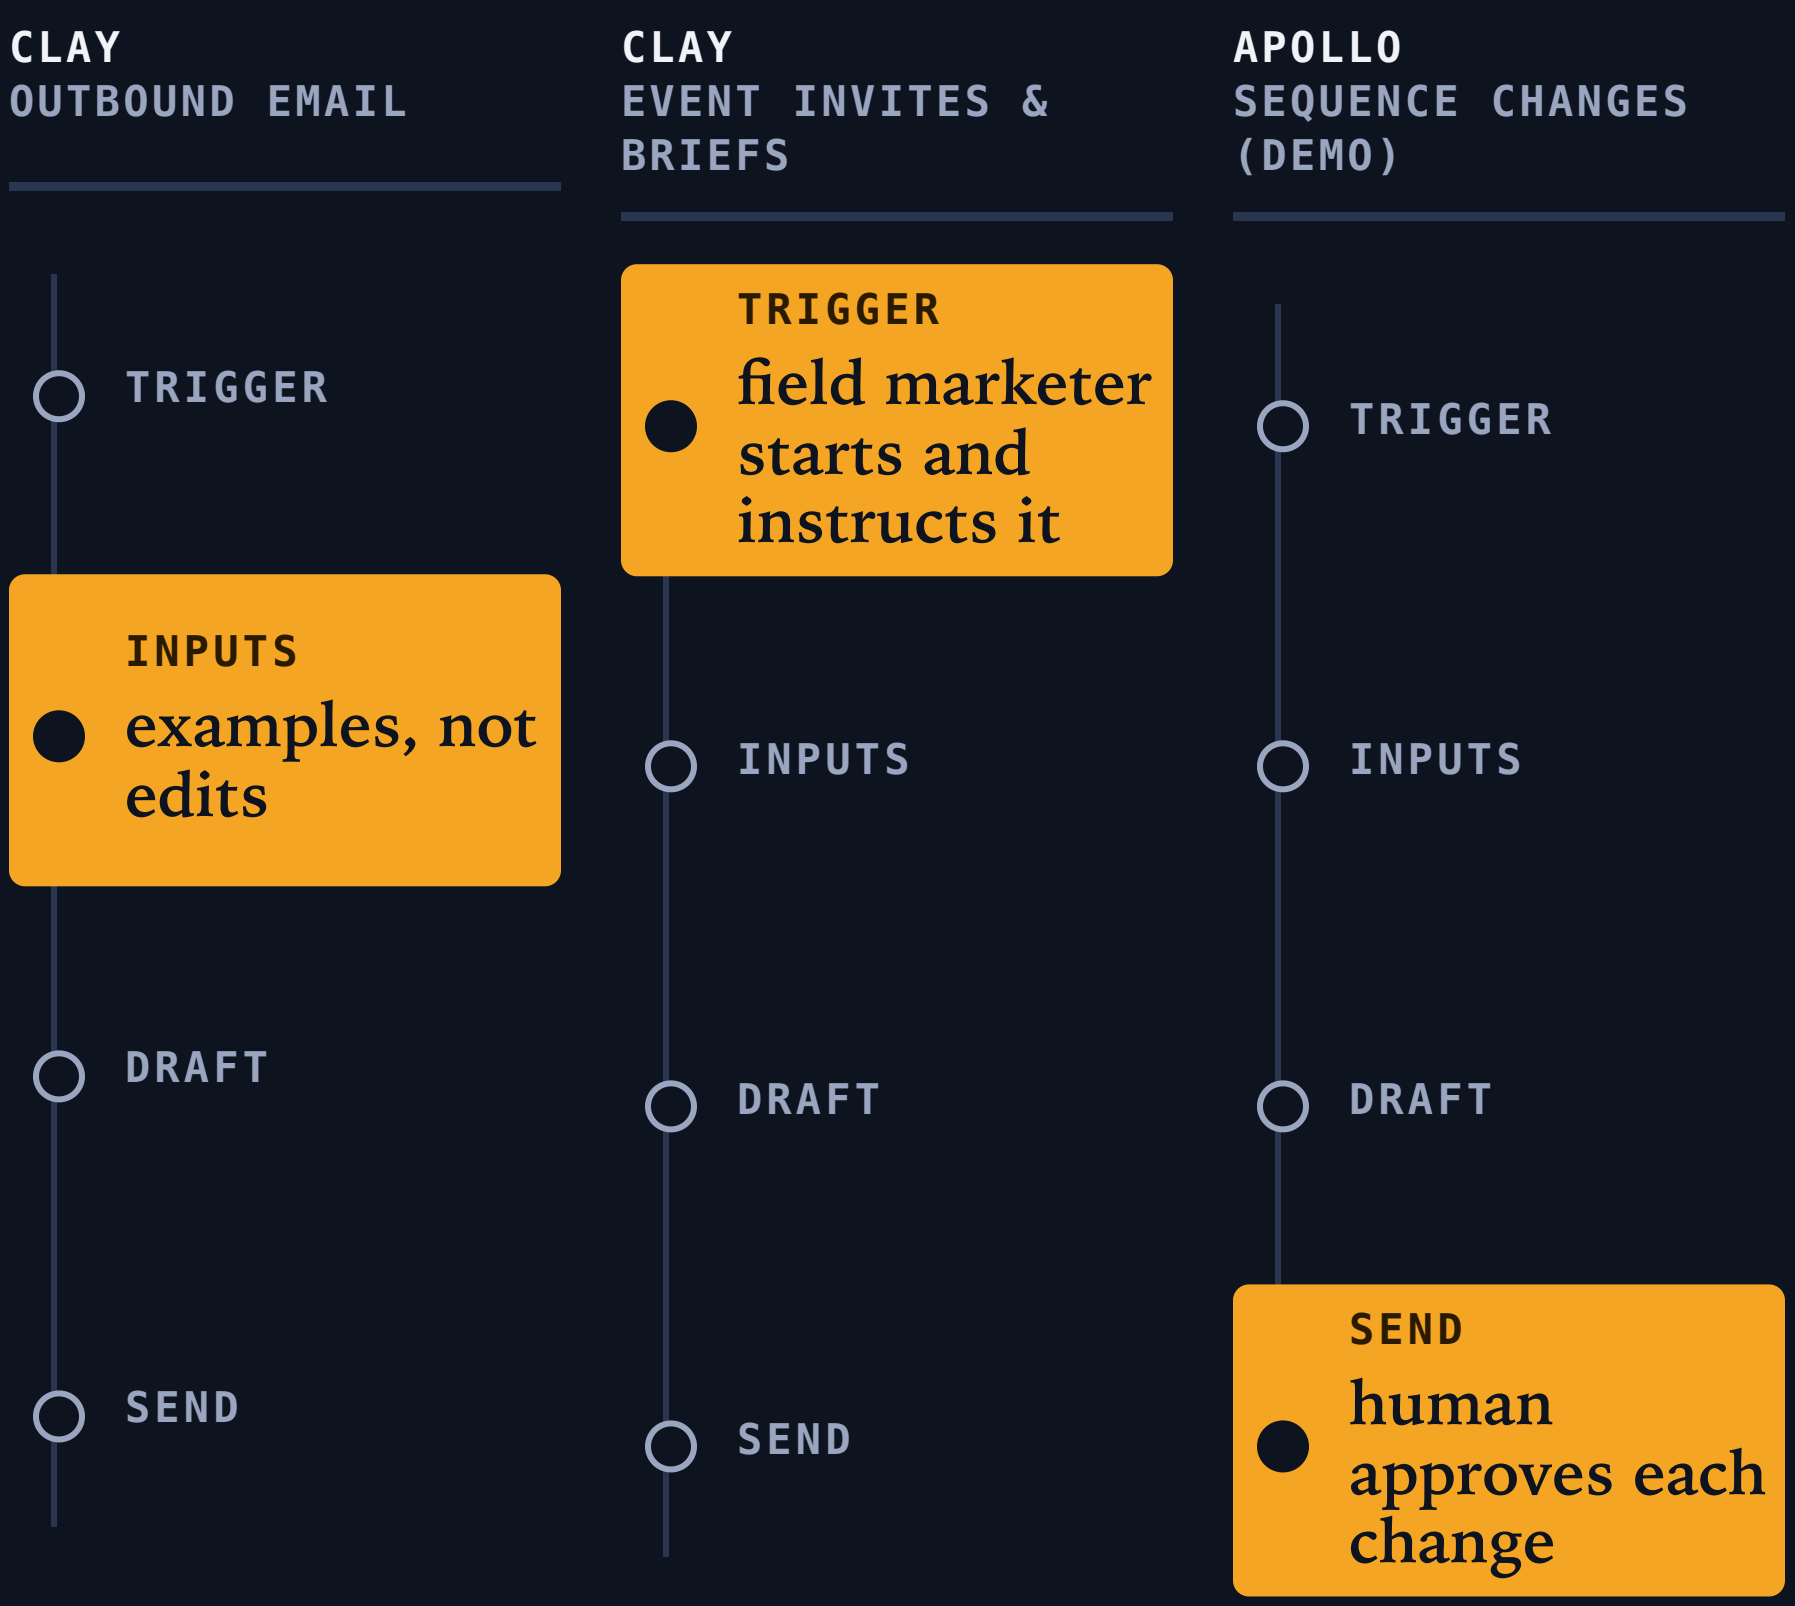

No exit threshold was named on stage.

Source: Clay deck (slide 'SDR + Growth + PMM built the message generator'); Grieco, ~20:00. Redrawn.

WHAT CHANGED · WHERE THE HUMAN SITS

Same day, three places for the line

Sources: Grieco (Clay) 19:30, 26:28; Sieglock (Apollo) demo, 20:13. Revolt! 2026, Oct 15.

SO WHAT

Before you add a gate, name its exit

1. **What does it collect?**
   keep the diff: proposed vs. sent

2. **What turns it off?**
   a number, not 'confident'

3. **Where does the human go next?**
   upstream: the examples

> *Which approval step would you switch off with the data to prove it?*

Synthesis: Alex Yedi, from Grieco (Clay), Revolt! 2026
