

Three surfaces. One answer.

How Apollo's CPO says to hold it together.

MECHANISM · APOLLO'S LOOP

Where the evals sit

BLUE = MY ANNOTATION

Apollo's stated aim: 'API first', available everywhere

> Gates = my annotation of the 'evals, evals, evals' line. The loop is Apollo's.

Source: Apollo, "The AI GTM System" (Revolt! 2026); eval gates annotated by Alex Yedi. Redrawn.

Agreeing isn't the same as right

Run both. Three surfaces can agree on the wrong number.

Builder's note: Alex Yedi. Prompted by Sieglock, Revolt! 2026 (S2 18:10)

CHECKLIST · APOLLO'S FIVE

Five recommendations, five tests

01 Find constraints & bottlenecks

Map the slowest stage

02 Unify data, context & execution

One record per account

03 No downtime; alert when wrong

Alert on drift

04 Integration flexibility & velocity

Swap a surface, rerun evals

05 Proactively find opportunities

Eval the recommendations too

GREY LINE: APOLLO BLUE LINE: MY TEST

YOUR TURN

What's your first consistency eval?

Same question, every surface, same answer?
