

The year of the agent.

Where agents started 2026, what changed, and where they stand going into tonight's lab.

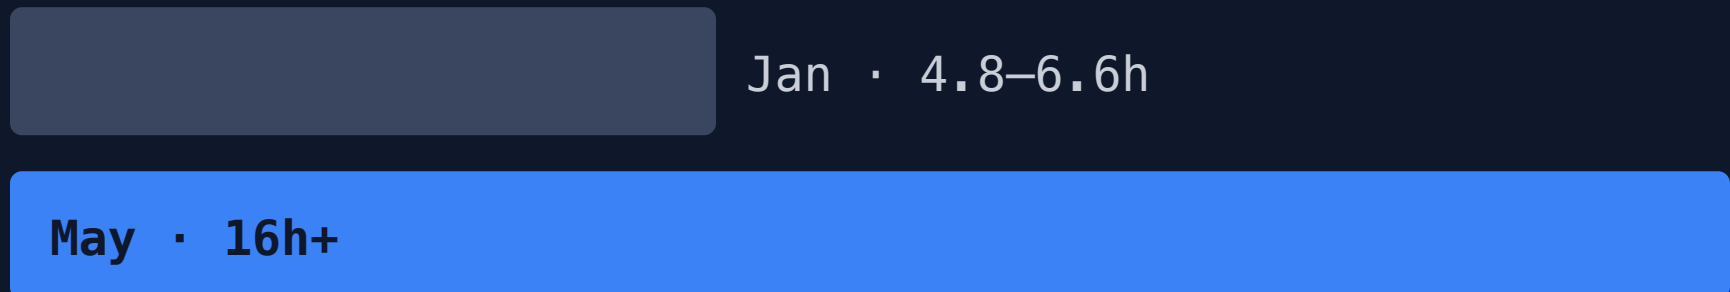

< 1h → ~ 3h

TRUSTED WORK · JAN

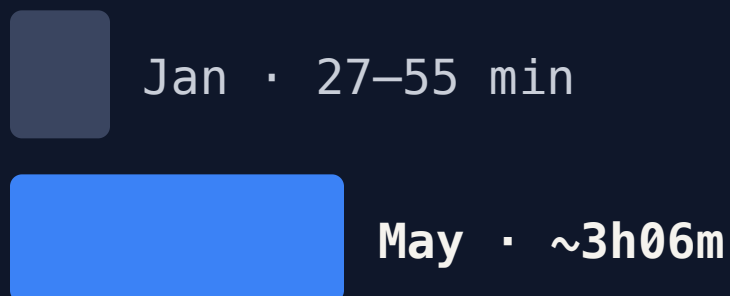

TRUSTED WORK · MAY

Attempts a two-day task. Trusted with an afternoon.

50% SUCCESS

80% SUCCESS

The gap between the two bars is what buyers now pay to close.

Length of expert task an agent completes at the given success rate. Jan: Claude Opus 4.5 / GPT-5.2 (METR, Dec 2025). May: Claude Mythos Preview, unreleased (METR; estimates past 16h are noisy, per METR).

The agent year, dated

- DEC 9 '25 MCP moves to the Linux Foundation
 - FEB 341 of 2,857 OpenClaw skills malicious
 - FEB Temporal valued at \$5B
 - MAR 12 A2A ships 1.0
 - APR 8 Anthropic Managed Agents (beta)
 - APR 22 Vertex AI → Gemini Enterprise Agent Platform
 - APR Agent deletes prod DB + backups in 9s
 - MAY 19 Google ADK 2.0: graphs that resume
 - JUL 28 MCP spec: stateless core + Tasks
 - SEP 10 OpenAI Agents API: durable sessions
 - SEP 14 Temporal valued at \$12.55B
 - SEP AgentCore GA; Bedrock hosts OpenAI's
 - OCT 6 Tonight: Agentic AI Builder Lab
- launch / standard ● incident

The bottleneck moved

	JAN 2026	OCT 2026
CAPABILITY	Under an hour, trusted	~3h trusted, 16h+ attempted
PROTOCOLS	MCP just donated; A2A pre-1.0	A2A 1.0; MCP built for long tasks
RUNTIME	Build your own	Every lab and cloud sells one
FAILURE	"Not smart enough"	"Why did it have the key?"
OPEN QUESTION	Can it do the task?	Who answers when it acts twice?

Adoption baseline: McKinsey (Nov 2025): 23% of companies scaling an agent anywhere; ≤10% in any one function. No like-for-like survey yet for Oct.

THE QUESTION I'M TAKING IN

Runtime, or you?

When a durable agent resumes after a crash,
who makes sure it doesn't do the same thing
twice?

Agentic AI Builder Lab with Google Cloud
