Nov 2–6, 2026 · 10 events · 6 in NYC, 4 streaming

6 stats that sum up the upcoming week in AI events

1 · Can it ship?
slides 2–3

2 · Who governs it?
slides 4–5

3 · Can you trust it at volume?
slides 6–7

One company's third vs the median's 0.5%

≈ 1 in 3

Zalando PRs auto-approved as low-risk.

One company's policy, 250+ teams, first-party, methodology not disclosed.

0.5%

Merges reviewed only by AI at the median company.

Jellyfish's own dataset, 1,300+ companies.

What it measures: two different things, one company's routing policy and a cross-company median. Neither is a controlled study.

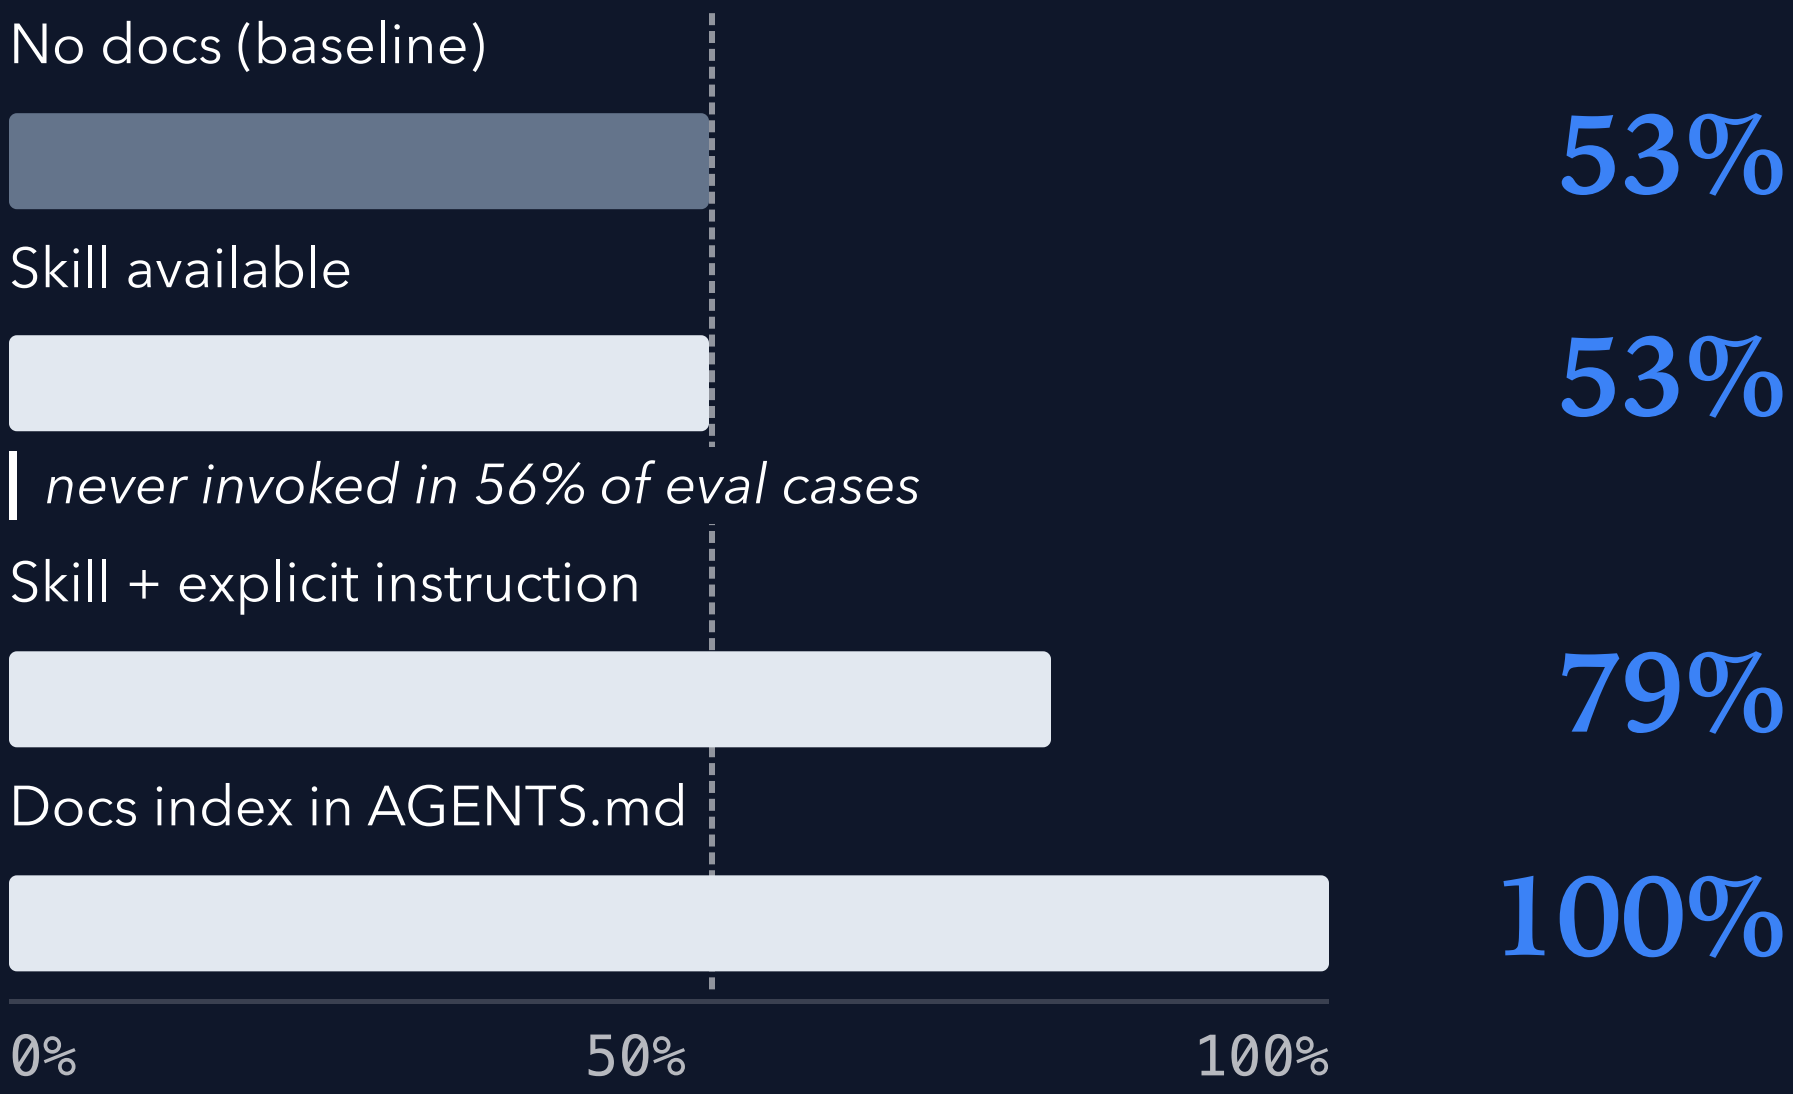

This week: AI DevCon NYC (livestream, Tue). Bartosz Ocytko (Zalando) on risk-tiered auto-approval.

Source: Zalando Engineering, 2026-08-14; Jellyfish via R&D World, 2026-10-27.

A skill the agent never opens

Pass rate, Vercel's coding-agent eval

What it measures: one vendor-run eval of framework knowledge, not a general benchmark.

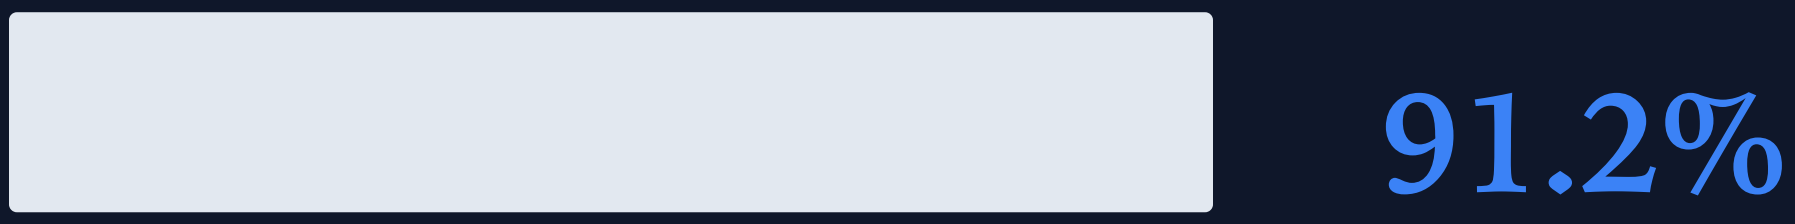

This week: Agentics Spotlight (NYU, Wed). Jesse Vincent (Prime Radiant) on skills, harnesses and hooks.

Source: Vercel, "AGENTS.md outperforms skills in our agent evals," 2026-01-27 (vendor-run eval).

Alex Yedi

Clean schemas 91%. Real enterprise work 21%.

Best agent, share of tasks solved

What it measures: the same kind of task on clean vs messy data. The gap is definitions, joins and dialects: what a governed business context is meant to fix.

This week: Snowflake Expedition, technical day (livestream, Tue). "Build One Business Context" and "Secure and Govern Data & Agents".

Source: Spider 2.0, ICLR 2025 (arXiv 2411.07763).

Five of six demos open a door

5 of 6 MCP connector advertised

- ZoomInfo — MCP
- Airspeed — MCP
- Goldcast — MCP
- Firmable — MCP
- Syft AI — MCP
- TitanX

When an agent can write to the CRM, who approves the write?

What it measures: what each company's own site advertises, not verified usage. Only ZoomInfo's launch is press-verified this quarter.

This week: Revolt! Demo Days (RevGenius, livestream, Wed–Thu).

Source: company websites, checked Nov 2026; ZoomInfo GTM AI launch page.

Twice the merges, nearly twice the review

+98%

PRs merged

+91%

PR review time

Developers on high-AI-adoption teams

What it measures: Faros AI's own telemetry, 10,000+ developers across 1,255 teams, as of mid-2025. Correlation, not a controlled study.

This week: Ghosts in the System (Ro HQ, Thu). Three companies' published approaches to checking AI output at volume: expert audit, always-on QA, curated answer sets.

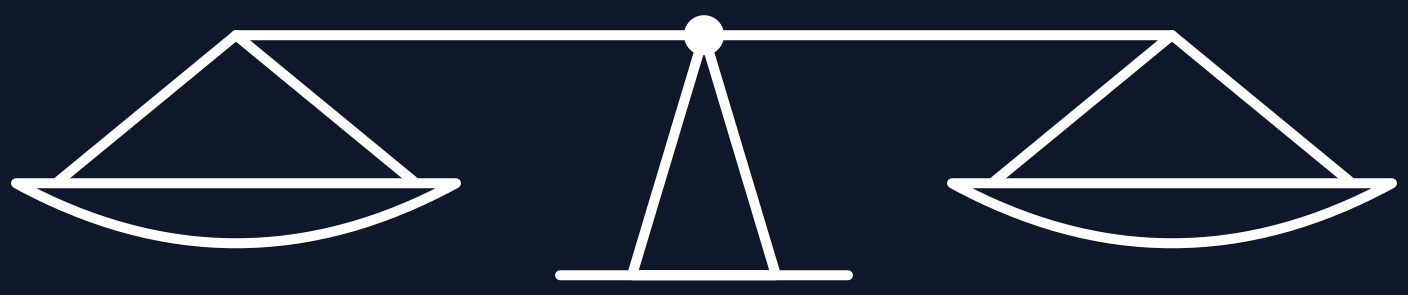

Source: Faros AI, "The AI Productivity Paradox," 2025-07-23 (vendor telemetry).

Faster replies, more model calls

100–200 ms
trimmed from end-to-end latency

50–70%
more LLM calls

`−100–200 ms latency` `+50–70% LLM calls`

Deepgram Flux "eager end-of-turn", which starts the LLM before the caller is surely done.

What it measures: the vendor's own documented trade-off, not a field measurement.

This week: NYC Voice Agent Hackathon (Fri). Judged partly on response time and turn-taking, tested on a real phone line.

Source: Deepgram developer docs, Flux voice-agent eager end-of-turn (vendor), 2026.

Six numbers, ten events, Nov 2–6. Not in NYC? Send me the question you'd ask.
