Silent failure vs. loud failure

TEXT-TO-SQL

SEMANTIC LAYER

A wrong number nobody questions travels further than no number.

Source: dbt Labs, Apr 2026 (silent vs. loud failure framing)

The fix isn't free

31%

best model on Spider 2.0, a text-to-SQL test built on realistic enterprise databases

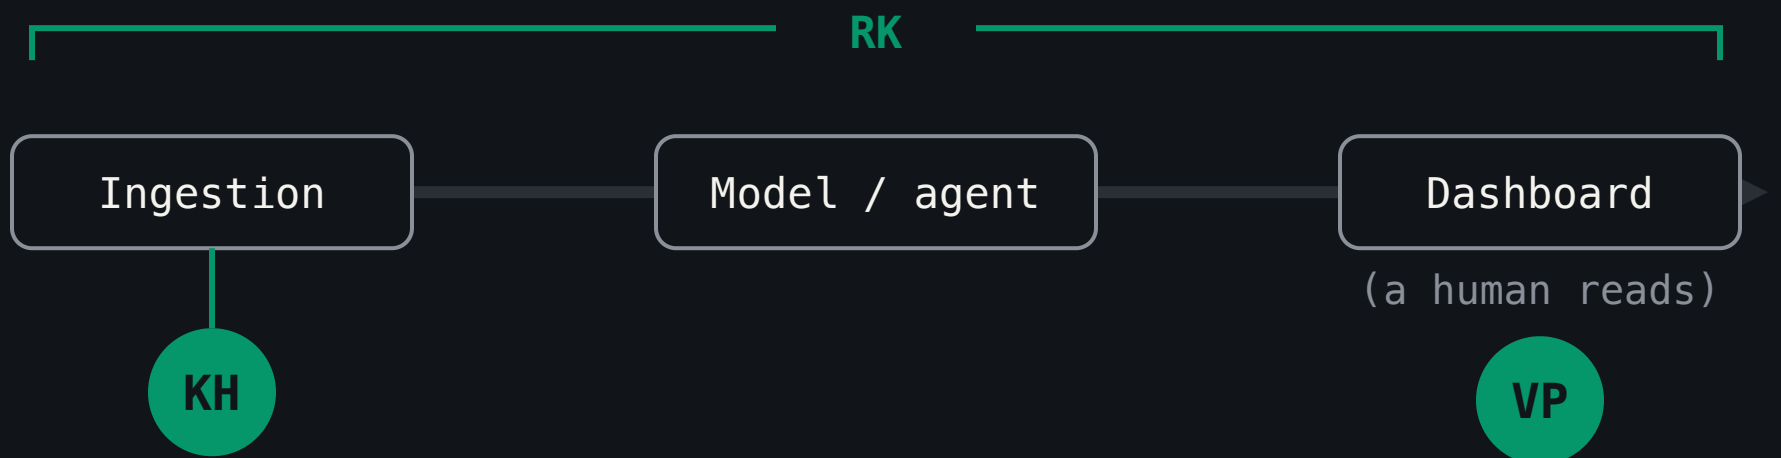

60%

of MCP-only agentic analytics projects Gartner expects to fail by 2028 without a semantic layer

But someone still has to write and maintain every metric definition.

Sources: Spider 2.0 via arXiv 2507.14372 (2025); Gartner Market Guide for Agentic Analytics, Feb 2026 (via Cube)

Where does trust break first?

KH Kevin Hu · Data Observability at Datadog
(ex-Metaplane)
watching the data upstream

RK Rebecca Keable · Head of Data, Forage
building the whole pipe from zero

VP Vamsi Peri · VP Engineering, Metabase
the layer people ask questions through

Tuesday's open conversation. What would you ask?
