

TWO NYC ROOMS · SEVEN WEEKS APART

Same founder. Opposite *verdicts*.

JUNE · NYC AI DEMOS #10

Autonomous agents doing
real work on stage.

Autonomy arrived.

AUGUST · REVGENIUS

The founders who build
them say don't trust one
unsupervised.

Autonomy lost.

DAVID WALKER (SPARA) WAS IN BOTH ROOMS ↓

AUTONOMY ARRIVED

Point it at a bounded job, and it *ships*.

Spaara

A GTM agent that demoed *itself* — qualified the buyer watching it.

Pace

Insurance agents on 20-year-old carrier terminals — in production, millions of runs.

Pensar

Agents that run their own exploit chains end-to-end.

BOUNDED TASK → THE AGENT SHIPS

AUTONOMY LOST

In the room built to sell it, the dream *lost*.

Bennaceur · Attention

An AI-agent CEO: "we doubled down on human SDRs."

Berry · Clay

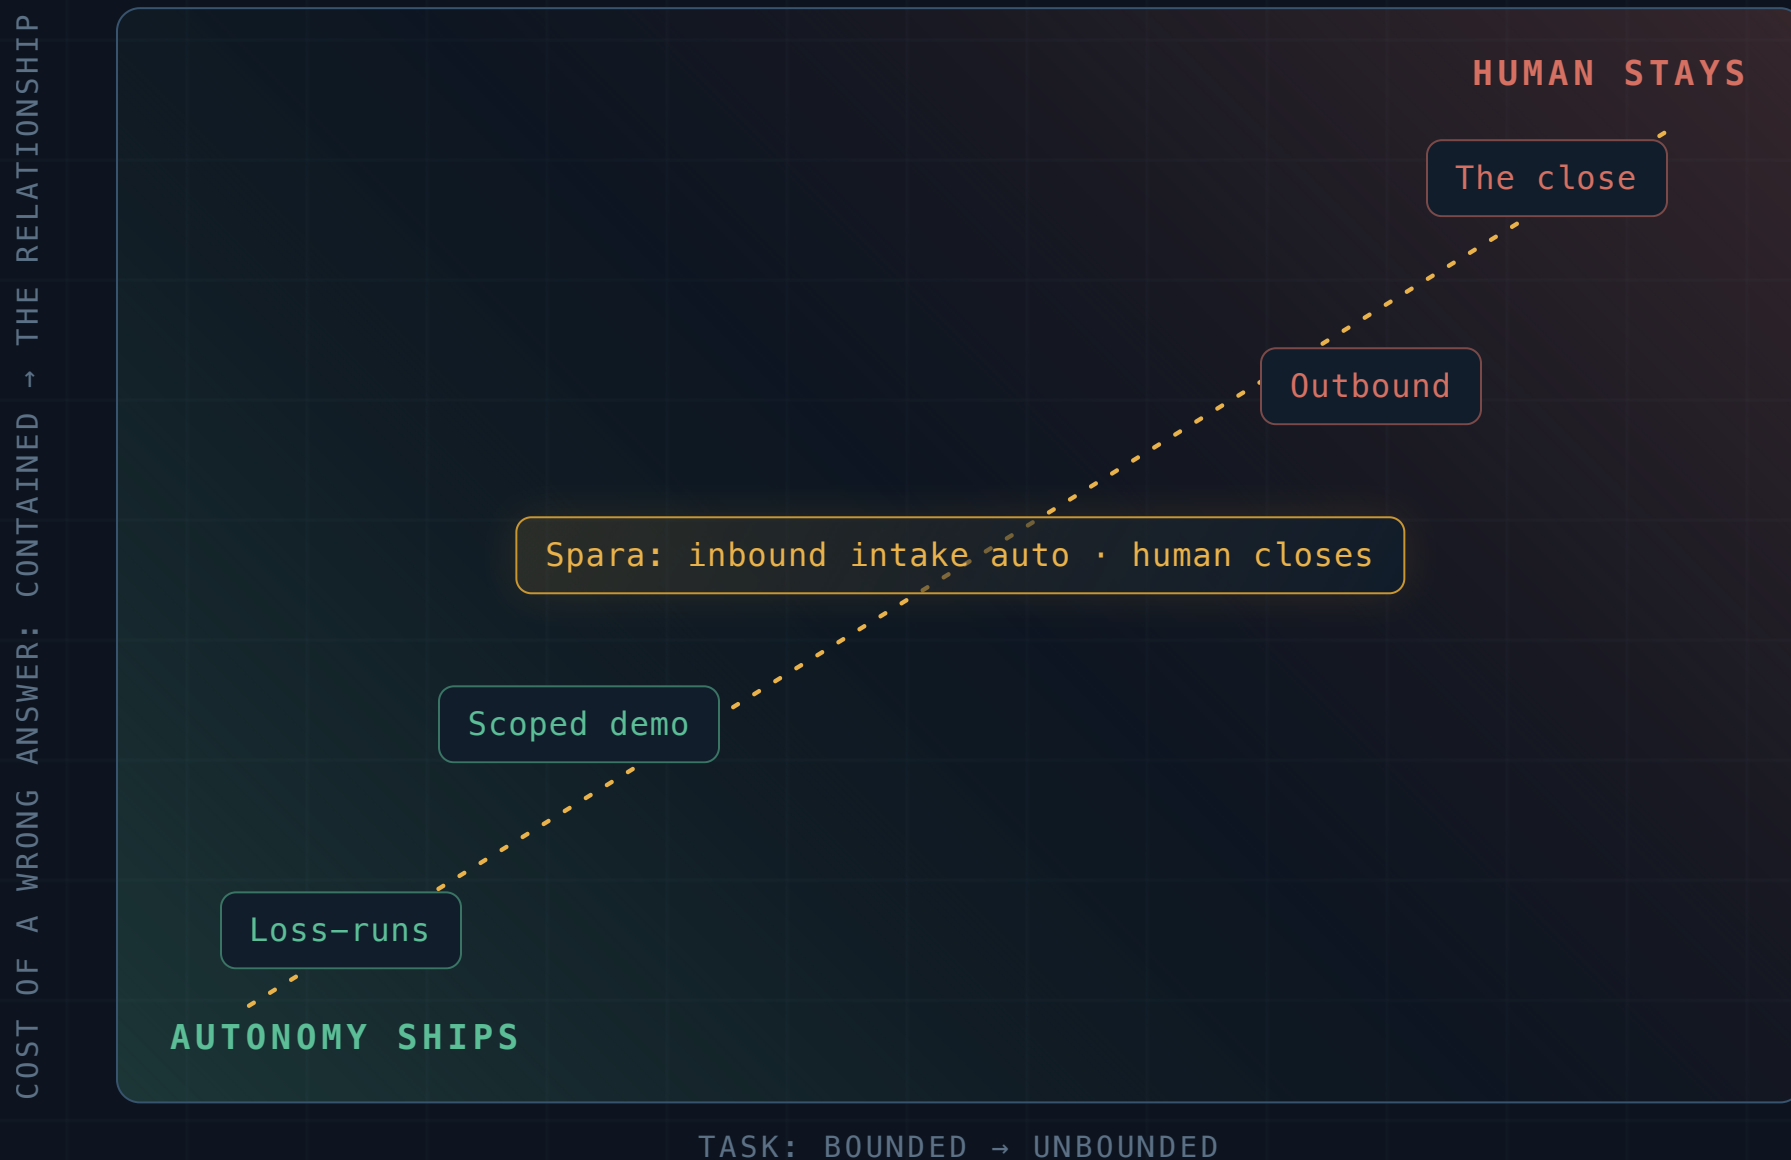

The "go make me money" agents — "not seeing results" there.

Walker · Spara

Humans still buy when someone needs skin in the game.

JUDGMENT & RELATIONSHIP → THE HUMAN STAYS

One line splits *ship* from *stay*.

Autonomy ships where the task is *bounded* and a wrong answer is cheap to catch. It loses where *judgment and the relationship are the product*.

THE OPEN QUESTION

Where's the line in *your*
world — what have you
handed an agent
unsupervised, and what
will you *never*?
