

92% can't see their own AI agents

And 95% doubt they could contain one that
turned.

Cloud Security Alliance · 2026 CISO AI Risk Report (n=235)

One badge vs. a badge that multiplies

HUMAN IDENTITY

- Hired once
- One identity
- Permissions reviewed
- Logs out

AGENT IDENTITY

- Mints credentials at runtime
- Spawns sub-agents
- Inherits access
- Never sleeps

Non-human identities already outnumber employees at most companies.

The rulebooks weren't written for actors

FRAMEWORK	BEHAVIOR KNOWN AT DEPLOY?	REAL-TIME ENFORCEMENT?	DEFINES AGENTIC AI?
NIST AI RMF	X	X	X
ISO 42001	X	X	X
EU AI Act	X	X	just started*

**The EU AI Act began naming "agentic AI" as a distinct class this month — the first crack in a framework built for AI that answers, not AI that acts.*

WHERE THE VALUE IS MOVING

The market is racing the standards

STARTS WITH

CISO anxiety — "we're 92% blind"

BECOMES

An agent-identity / NHI vendor category

THEN, IN ONE WEEK THIS SUMMER

Cisco → Astrix · Cyera → Oasis (\$1B) · Okta → Permiso

If you run agents in production —
what's actually in your **agent inventory?**
