

The agent plans. The platform runs.

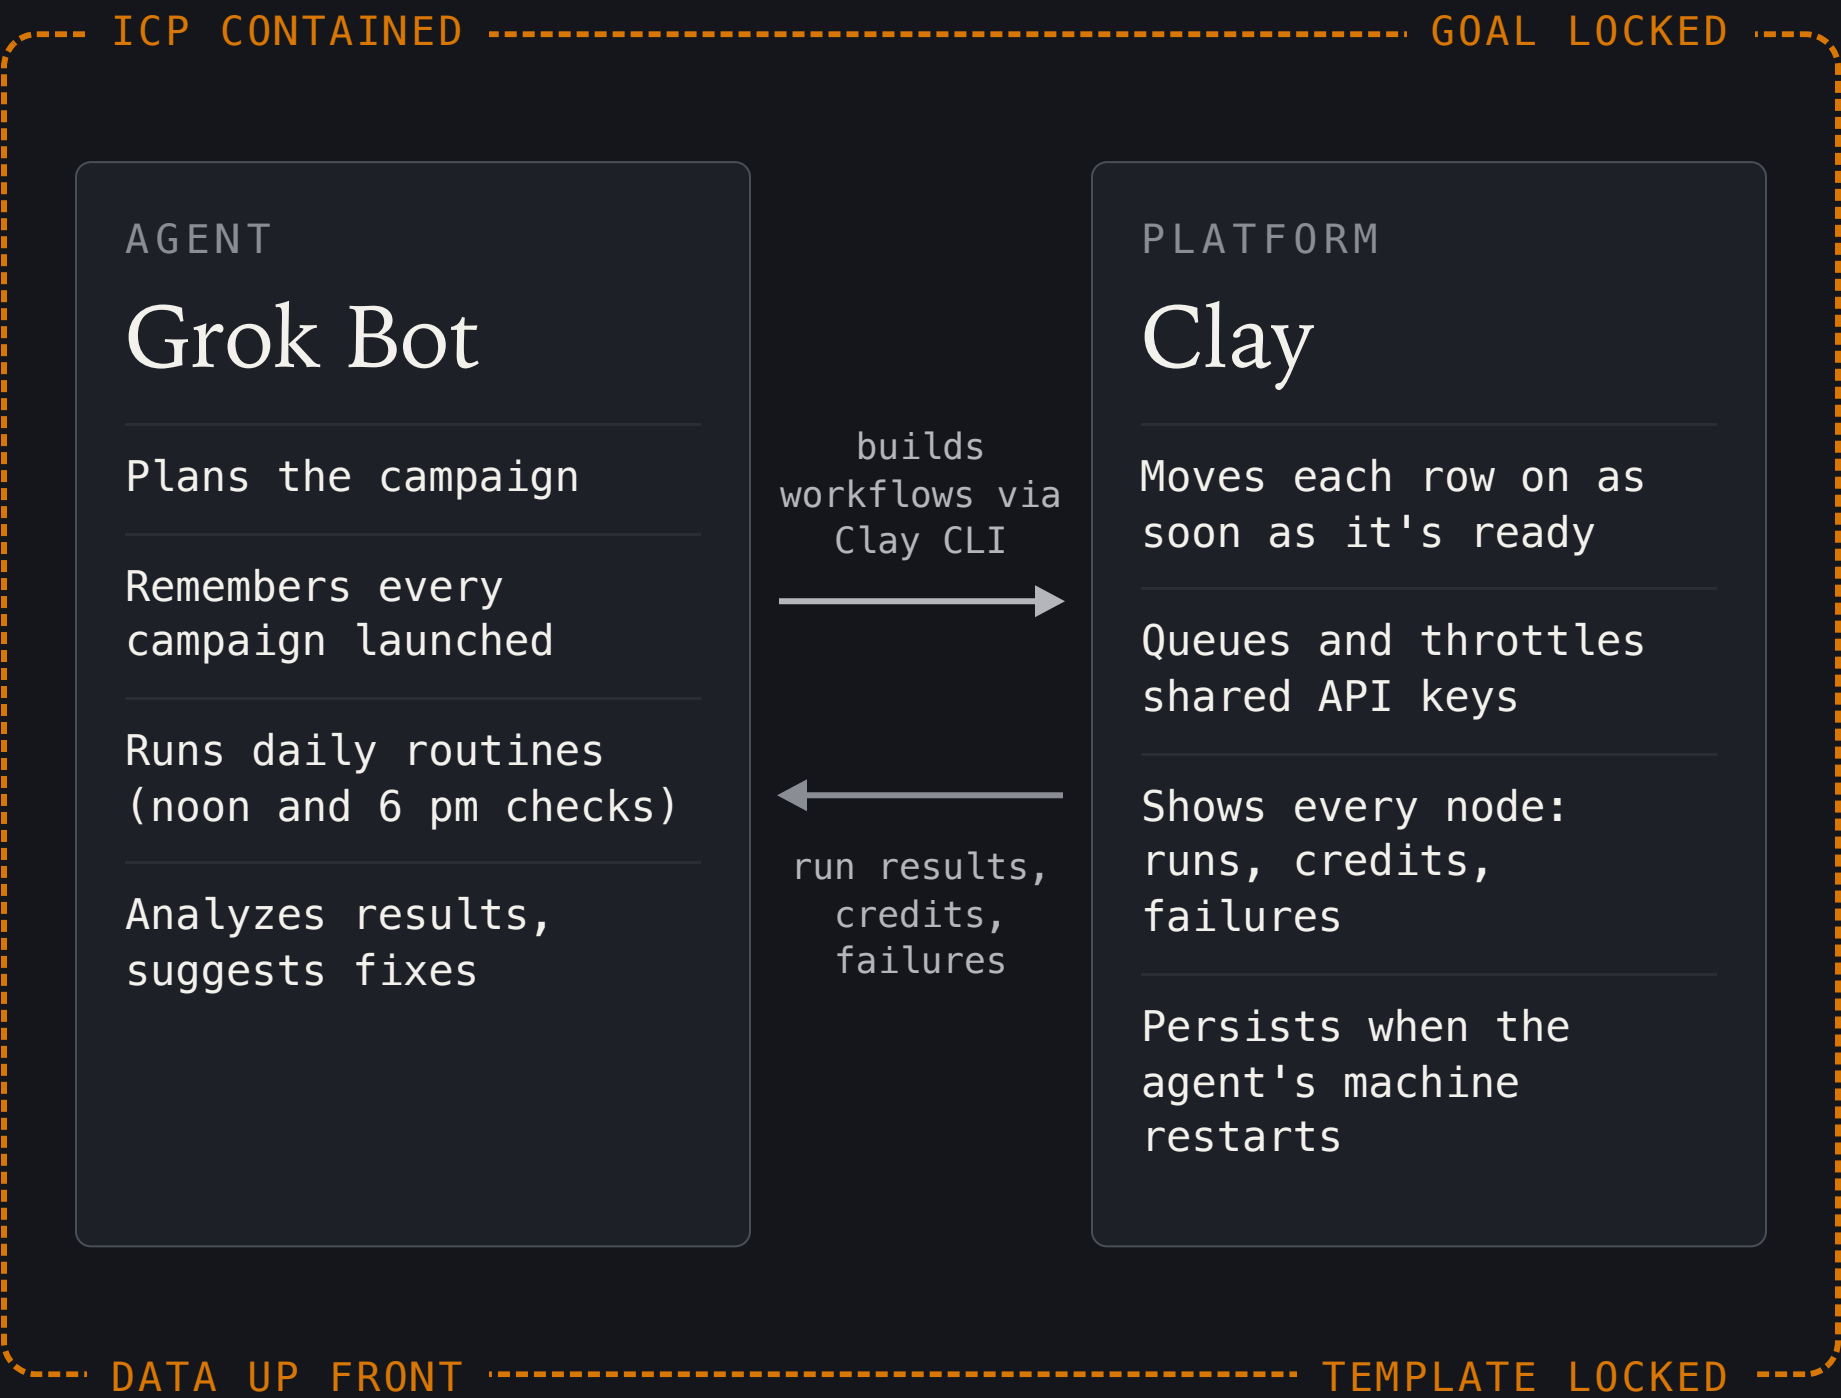

The human draws the fence.

Episode 1 of Clay's new builders & agencies series
55-minute screen-share demo · Sept 23, 2026

AGENT	Grok Bot (xAI)
PLATFORM	Clay
FENCE	The human

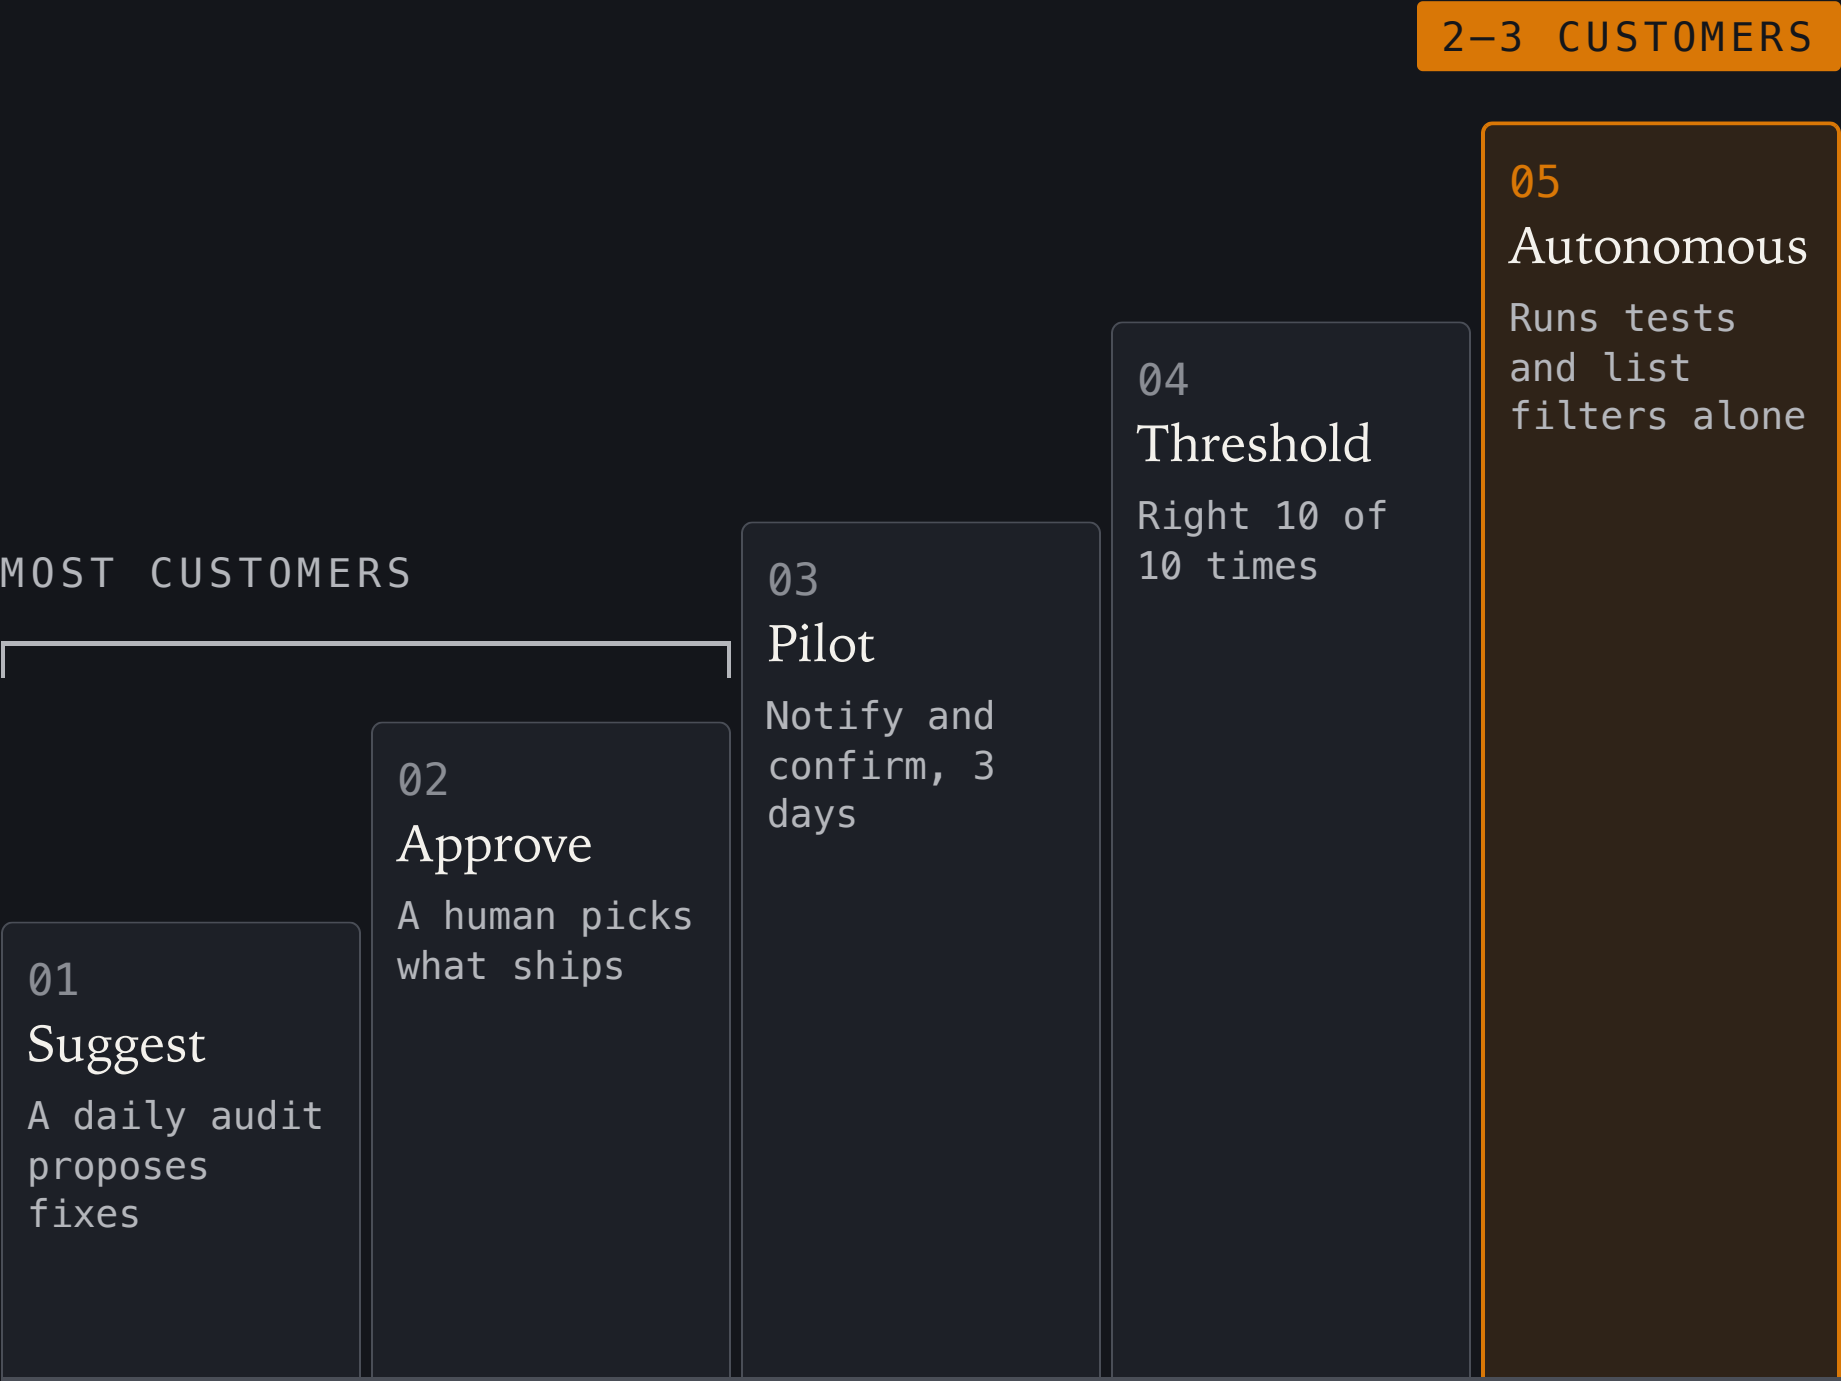

HOST	GUEST
Davide Grieco Head of Growth, Clay	Eric Nowoslawski Founder, Growth Engine X

Two lanes, one fence

---- The fence: four limits a human sets before any loop runs

Autonomy is earned per customer

Rungs 3-4 are Eric's path for automating email replies.

Built by the bot, CSV to sender

◆ = a cheap yes/no decision model, not a chat model

Two campaigns: bankruptcy lawyers and construction firms.
Built by a bot trained on the agency's past Clay workflows.

Fences before autonomy

1 Contain the ICP

The agent can't drift from colleges to marketing agencies

2 Lock the goal

The meeting stays the goal, even when the AI argues against it

3 Pull data up front

No mid-run "game time" pulls that overspend or pull wrong

4 Lock the template

One marked slot for the value prop or pain; the frame is human

5 Grade the first 50

Review outputs good or bad before running at scale

Still open: who cuts the bottom 30% of sending domains, the bot or a human?
