FRONTIER HACKATHON · NYC · OCT 30

Eight controls. Which can I hold alone?

SOLO NEEDED HELP OUT OF REACH

Predicted 4 of 8 solo · my bar: 5 · results after Oct 30

Control list: Frontier Build NYC 2 invite, 2026. Prediction: the author's.

Where each control lives

CONTROL	IN OBVIOUS (PER ITS DOCS)
Specs	Product, UX, Technical phases; an agent can draft one from an idea
Context	AGENTS.md + .obvious/obvious.md; three clear rules beat thirty vague ones
Skills	SKILL.md folders, default branch only, cached up to 15 min
Review	config.yml rules: first match wins, max 20
QA	tests once per changed package, in parallel
CI	your existing pipeline runs on every PR
Loops	Loop Designer: on demand, trigger or schedule
Design systems	no Obvious doc found

Sources: Obvious Help Center (spec framework, repository context, custom skills, config.yml reference) and Autobuild page, fetched Oct 2026

Does the factory read my rules?

TEST TASK: one that only a CLAUDE.md rule can answer.

RULE FOLLOWED	RULE IGNORED
RUN 1: **repo as-is (CLAUDE.md only)**	
☐ CLAUDE.md is read. Rules port as-is.	☐ Expected: Obvious's context page doesn't mention CLAUDE.md.
RUN 2: **+ one-line AGENTS.md pointer**	
☐ A pointer is enough. Low switching cost.	☐ The rules file is the lock-in.

Source: Obvious Help Center, "Give Autobuild repository context," fetched Oct 2026

Who may click merge?

GitHub AI Scan OCT 15	advisory: can't block a merge
Copilot code review SEPT 1	can approve, on admin-chosen paths, off by default
Obvious	require-human-merge, set per workspace
Vercel Foreman template	stops at a draft PR; merge isn't one of its tools

Where would you draw it on your repo?
