# If 94% are caught, who finds the rest?

Ghosts in the System · Ro HQ, NYC · Thu Nov 5

Source: Ro, ro.co/dtp/ai-triage (Ro's own published figures, self-reported), 2025.

# Faster. And maybe 6 in 100 unflagged?

MEDIAN RESPONSE TIME

REAL SIDE-EFFECT MESSAGES (IMPLIED, IF 94% IS SENSITIVITY)

> Urgent-subset miss rate: not found in Ro’s published material.

Source: Ro, ro.co/dtp/ai-triage (Ro’s own published figures, self-reported), 2025. 6-in-100 split is my inference from the 94% true-positive rate.

# Three jobs. Three ways to fail.

| | CLASSIFY | TRIAGE | ROUTE / DRAFT |
|---|---|---|---|
| FAILURE | wrong label | **urgent message not flagged** | bad draft gets approved |
| WHO NOTICES | an audit sample | **nobody, it just waits** | the human reading it, if they read closely |

# Three reliability stories, each self-reported

| COMPANY | HOW THEY SAY THEY KEEP IT RELIABLE | WHO CHECKED IT |
|---|---|---|
| **Ro** | Ongoing human expert audits | Self-reported (Ro's own page) |
| **Decagon** | Simulations pre-launch, Watchtower always-on QA, Experiment Hub | Vendor-run benchmark (DuetBench) |
| **Nayya** | Expert-curated datasets, automated evals across thousands of scenarios, playtesting | Vendor-described |
