

What an AI agent actually sees

FILING ROOMS

Context rot: a fuller desk is not a better desk

Context rot + "attention budget": Anthropic, Effective context engineering for AI agents, 2025. Curve is schematic, not measured data.

Same four parts. Different source of truth.

- index / graph
- connectors
- permissions
- agents

Notion	TRUTH LIVES IN The workspace where people author pages, plus Enterprise Search across Slack, Drive, GitHub
Glean	TRUTH LIVES IN A knowledge-graph layer over other systems; agents with their own identity + permissions (Aug 2026)
Atlassian Rovo	TRUTH LIVES IN Work objects: issues, wiki, code, design, in a Teamwork Graph opened to outside agents over MCP
Microsoft · Google	TRUTH LIVES IN The productivity suite itself: mail, calendar, files, chat

Sources: notion.com/product/ai; The Letter Two on Glean:G0 (2026-08-30) and Atlassian Teamwork Graph (2026-05-06). Microsoft/Google row: general positioning, not re-checked this cycle.

Where an agent run needs a receipt

"Context" means three different things

MODEL tokens

What sits in the window

Curating the set of tokens a model sees at each step of its work.

Anthropic engineering guide, 2025

DATABASE telemetry

What an assistant sees of Postgres

Which query stats and settings reach the model before it suggests a tuning change.

pganalyze · "Context Is Everything" · Wed Sept 16, evening, Midtown

ORG knowledge

What a company can hand an agent

Data, docs, workflows, permissions and tribal knowledge, joined up.

Notion · "Context is King" · Wed Sept 16, 1pm ET

One discipline at three altitudes, or three fields sharing a word?
