DAYTONA HACKSPRINT #6 · NYC · OCT 16

Safe, according to which layer?

Every team pitches its safeguards in three minutes, then demos the agent operating safely.

THE SAFEGUARDS MAP · WHO SELLS WHAT

Three layers, three sellers

Containment THE WALL

STOPS	A mistake escaping into real systems
MISSES	A tool call the agent is **allowed** to make
SOLD BY	Daytona (sandboxes) · Anchor Browser (cloud browsers)

Policy THE RULES

STOPS	A tool call, **before it runs** (allow / deny)
MISSES	Whether an allowed action got the right answer
SOLD BY	AWS (AgentCore Policy, GA March 2026)

Evidence THE RECEIPTS

STOPS	Nothing alone; it **records and scores** it
MISSES	Harm in real time, unless evals run live
SOLD BY	Arize, now part of Dynatrace · AWS (AgentCore Evaluations)

Also partners, and what gets protected: **SurrealDB** (memory), **ElevenLabs** (voice)

THE EVIDENCE LAYER · SHARE OF AGENT TEAMS

Many cameras, fewer referees

Scores the agent while it runs Watches, or tests offline

Observability

CAN SEE WHAT THE AGENT DID

89%

Offline evals

SCORES IT ON A TEST SET

52%

Online evals

SCORES IT LIVE, IN PRODUCTION

37%

Watching to grading live: a **52-point drop**. Most teams can replay what an agent did. Far fewer score it while it acts.

THE LAYERS CAN FIGHT · ARIZE'S OWN DEMO

Safer isn't the same as working

Before the fix After the fix

Task completion

SHARE OF VALID REQUESTS COMPLETED

Action safety went **up** with the same fix.

One change, two scores, opposite directions.

The post's lesson: **score safety and task success separately**, on the same test set, before and after every fix.

FRIDAY'S OPEN QUESTION · FOR ANY AGENT DEMO

Which layer earns the trust?

- [ ] CONTAINMENT
  What is walled off, and what still gets out?

- [ ] POLICY
  Which call was denied, and by what, outside the model?

- [ ] EVIDENCE
  What was scored, live, over how many runs?

Three minutes. Which box does the winner tick?
